Abs Monocytes Manual Guide - e13components.com  
What Are Monocytes? A monocyte is a type of white blood cell (WBC). Its main function is to fight off infection. Monocytes also aid other WBCs to destroy cancer cells and remove tissue that's damaged. They regulate the body's immunity too, among other things. Monocytes are first produced in bone marrow and are released into the blood. They travel through the blood to vital organs, such as the lungs, liver and spleen.

Abs Monocytes Manual Guide - cgetrpvh.gov.helloawesome.co  
The monocytes are integral in the immune system as they help fight certain infections and help other white blood cells eliminate damaged body tissues. They have a distinguishing feature; they have big, kidney-shaped nucleus. Monocytes account for about 2-10% of white blood cells circulating in the blood. (2, 3)

Low Monocytes - Symptoms, Causes, Treatment, Diet  
Absolute Monocytes Low, High, Normal Range, Blood Test Learn all about absolute monocytes low, high, normal range and blood test. Monocytes are produced in the bone marrow and then enter the blood, where they account for about 1 to 10% of the circulating white blood cells (200 to 600 monocytes per microliter of blood).

Absolute Monocytes Low, High, Normal Range, Blood Test  
The monocytes help to fight infections, work in conjunction with other white blood cells to remove dead or damaged tissue and regulate the immune response, according to Merck Manual. The other white blood cells that work together with monocytes include lymphocytes, neutrophils, basophils and eosinophils.
