Solutions to Advanced Problems. we find that for some polynomial $h(x)$, independent of m , with integer coefficients such that $(1 + w,)^th(w,) = 2$. But then $(x + 1)h(x) - 2$ is divisible by $xt + 1$ and hence we can write $(x + 1)h(x) = 2 + (xt + 1)u(x)$, for some polynomial $u(x)$ with integer coefficients.

~~...~~

Linear Algebra Igor Yanovsky, 2005 5 Theorem. V and W are isomorphic, there is a bijective linear map $L: V \rightarrow W$. Proof.) If V and W are isomorphic we can find linear maps $L: V \rightarrow W$ and $K: W \rightarrow V$ so that $LK = IW$ and $KL = IV$. Then for any $y = IW(y) = L(K(y))$ so we can let $x = K(y)$, which means L is onto. If $L(x_1) = L(x_2)$ then $x_1 = IV(x_1) = KL(x_1) = KL(x_2) = IV(x_2) = x_2$, which means L is 1;1.
