While historians are unsure about the truth of the Eureka legend, it is certain that Archimedes discovered the principle of buoyancy: an object immersed in a fluid experiences an upward force equal to the weight of the displaced fluid. Students can explore this law in the Archimedes' Principle Gizmo. In the Gizmo, students can vary the dimensions and mass of a "boat," see how this affects the buoyant forces on the boat, and determine whether the boat floats or sinks.

Gizmo Warm-up When you place an object in liquid, the downward pull of gravity causes it to start to sink. As the object sinks, the liquid pushes back up on the object with a force that opposes gravity. In the Archimedes' Principle Gizmo, you will see how these forces cause objects to either sink or float.
