Let the number of games that the chess master plays chess on the day be  $x$ . Let  $n$  talk about 11 weeks, so the range of the index is from 1 to 77. And the sum of all the games should be less than or equal to 132 because the chess master never plays more than 11 games in a week. Define another variable as follows:  $y$ . This variable denotes the number of games the chess master plays for the first ...
