by Martha R. Taylor. This printed learning aid provides a concept map of each chapter, chapter summaries, word roots, chapter tests, and a variety of interactive questions including multiple-choice, short-answer essay, labeling art, and graph-interpretation questions.

Students can master key concepts and earn a better grade with the thought-provoking exercises found in this study guide. A wide range of questions and activities help students test their understanding of biology. The Student Study Guide also includes references to student media activities on the Campbell Biology CD-ROM and Website.

This manual is an indispensable tool for introducing advanced undergraduates and beginning graduate students to the techniques of recombinant DNA technology, or gene cloning and expression. The techniques used in basic research and biotechnology laboratories are covered in detail. Students gain hands-on experience from start to finish in subcloning a gene into an expression vector, through purification of the recombinant protein. The third edition has been completely re-written, with new laboratory exercises and all new illustrations and text, designed for a typical 15-week semester, rather than a 4-week intensive course. The "project" approach to experiments was maintained: students still follow a cloning project
