is equal to the denominator.

~~Answers to Conversion Factor Problems —
Chemistry LibreTexts~~

If we convert inches into cm, the conversion factor is 2.54 cm / 1 inch. If we convert cm into inches, the conversion factor is 1 inch / 2.54. Using conversion factors to solve problems - Examples. Example 1 : Elena wants to buy 2 gallons of milk but can only find quart containers for sale. How many quarts does she need ? Solution : Step 1 :

~~USING CONVERSION FACTORS TO SOLVE PROBLEMS~~

Get Free Conversion Factor Problems With Answers

To solve the problem more formally with a conversion factor, we first write the quantity we are given, 3.55 m. Then we multiply this quantity by a conversion factor, which is the same as multiplying it by 1. We can write 1 as $100 \text{ cm} / 1 \text{ m}$ and multiply: (2.6.5) $3.55 \text{ m} \times 100 \text{ cm} / 1 \text{ m}$

~~2.6: Problem Solving and Unit Conversions~~ ~~Chemistry ...~~

In a conversion factor, the smaller number is part of the quantity that has the _____ unit. The larger number is part of the quantity that has the _____ unit.

~~Converting Units: Examples | Purplemath~~

In some problems, you may have to convert between moles or grams of some molecules and atoms of an element in that molecule. For example, you might be given moles or grams of C_2H_6 and be asked to find the number of H atoms in that sample. In problems like this, you can use the fact that there are 6 atoms of H in 1 mol of C_2H_6 as a conversion factor.
