How to solve separable differential equations To find explicit solutions of separable differential equations, we use a technique familiar from calculus. To illustrate the method, consider the differential equation  $dy/dx = 2 - dy/dx$ . There is a temptation to solve this equation by simply integrating both sides of the equation with respect to  $x$ .

As for the solution manual itself it is pretty standard. It has the solutions to the odd problems. It walks you through the steps, and thankfully, unlike many solution manuals does not skip a lot of steps. When they do, it is something that is really basic that a student taking differential equations should be able to follow.
