The Prince and the Wolf contains the transcript of a debate which took place on 5th February 2008 at the London School of Economics (LSE) between the prominent French sociologist, anthropologist, and philosopher Bruno Latour and the Cairo-based American philosopher Graham Harman.

Bruno Latour, the French sociologist, anthropologist and long-established superstar in the social sciences is revisited in this pioneering account of his ever-evolving political philosophy.

Breaking from the traditional focus on his metaphysics, most recently seen in Harman's book *Prince of Networks* (2009), the author instead begins with the Hobbesian and even Machiavellian underpinnings of Latour's early period and encountering his shift towards Carl Schmitt and finishing with his final development into the Lippmann / Dewey debate. Harman brings these twists and turns into sharp focus in terms of Latour's personal political thinking. Along with Latour's most important articles on political themes, the book chooses three works as exemplary of the distinct periods in Latour's thinking: *The Pasteurization of France*, *Politics of Nature*, and the recently published *An Inquiry Into Modes of Existence*, as his conception of politics evolves from a global power struggle between individuals, to the fabrication of

fragile parliamentary networks, to just one mode of existence among many others.

These 13 essays explore Bruno Latour's legal theory from a variety of disciplinary perspectives. They combine analytical tools drawn from Latour's actor-network theory developed in *Science in Action*, *Reassembling the Social* and *The Making of Law* with the philosophical anthropology of the Moderns in *An Inquiry into Modes of Existence* to blaze a new trail in legal epistemology.

This book offers a novel account of grace framed in terms of Bruno Latour's "principle of irreduction." It thus models an object-oriented approach to grace, experimentally moving a

traditional Christian understanding of grace out of a top-down, theistic ontology and into an agent-based, object-oriented ontology. In the process, it also provides a systematic and original account of Latour's overall project. The account of grace offered here redistributes the tasks assigned to science and religion. Where now the work of science is to bring into focus objects that are too distant, too resistant, and too transcendent to be visible, the business of religion is to bring into focus objects that are too near, too available, and too immanent to be visible. Where science reveals transcendent objects by correcting for our nearsightedness, religion reveals immanent objects by correcting for our farsightedness. Speculative Grace remaps the meaning of grace and examines the kinds of religious instruments and practices

that, as a result, take center stage.

What objects exist in the social world and how should we understand them? Is a specific Pizza Hut restaurant as real as the employees, tables, napkins and pizzas of which it is composed, and as real as the Pizza Hut corporation with its headquarters in Wichita, the United States, the planet Earth and the social and economic impact of the restaurant on the lives of its employees and customers? In this book the founder of object-oriented philosophy develops his approach in order to shed light on the nature and status of objects in social life. While it is often assumed that an interest in objects amounts to a form of materialism, Harman rejects this view and develops instead an “immaterialist” method. By

examining the work of leading contemporary thinkers such as Bruno Latour and Levi Bryant, he develops a forceful critique of 'actor-network theory'. In an extended discussion of Leibniz's famous example of the Dutch East India Company, Harman argues that this company qualifies for objecthood neither through 'what it is' or 'what it does', but through its irreducibility to either of these forms. The phases of its life, argues Harman, are not demarcated primarily by dramatic incidents but by moments of symbiosis, a term he draws from the biologist Lynn Margulis. This book provides a key counterpoint to the now ubiquitous social theories of constant change, holistic networks, performative identities, and the construction of things by human practice. It will appeal to anyone interested in cutting-edge debates in philosophy and

social and cultural theory.

French sociologist Bruno Latour has previously written about the relationship between people, science and technology. In this book he sets out his own ideas about 'actor network theory' and its relevance to management and organisation theory.

A scientist friend asked Bruno Latour point-blank: "Do you believe in reality?" Taken aback by this strange query, Latour offers his meticulous response in Pandora's Hope. It is a remarkable argument for understanding the reality of science in practical terms. In this book, Latour, identified by Richard Rorty as the new "bête noire of the science worshipers,"

gives us his most philosophically informed book since *Science in Action*. Through case studies of scientists in the Amazon analyzing soil and in Pasteur's lab studying the fermentation of lactic acid, he shows us the myriad steps by which events in the material world are transformed into items of scientific knowledge. Through many examples in the world of technology, we see how the material and human worlds come together and are reciprocally transformed in this process. Why, Latour asks, did the idea of an independent reality, free of human interaction, emerge in the first place? His answer to this question, harking back to the debates between *Might and Right* narrated by Plato, points to the real stakes in the so-called science wars: the perplexed submission of ordinary people before the warring forces of

claimants to the ultimate truth.

Modernity has had so many meanings and tries to combine so many contradictory sets of attitudes and values that it has become impossible to use it to define the future. It has ended up crashing like an overloaded computer. Hence the idea is that modernity might need a sort of reset. Not a clean break, not a "tabula rasa," not another iconoclastic gesture, but rather a restart of the complicated programs that have been accumulated, over the course of history, in what is often called the "modernist project." This operation has become all the more urgent now that the ecological mutation is forcing us to reorient ourselves toward an experience of the material world for which we don't seem to have good recording

devices. Reset Modernity! is organized around six procedures that might induce the readers to reset some of those instruments. Once this reset has been completed, readers might be better prepared for a series of new encounters with other cultures. After having been thrown into the modernist maelstrom, those cultures have difficulties that are just as grave as ours in orienting themselves within the notion of modernity. It is not impossible that the course of those encounters might be altered after modernizers have reset their own way of recording their experience of the world. At the intersection of art, philosophy, and anthropology, Reset Modernity! has assembled close to sixty authors, most of whom have participated, in one way or another, in the Inquiry into Modes of Existence initiated by Bruno Latour. Together

they try to see whether such a reset and such encounters have any practicality. Much like the two exhibitions Iconoclasm and Making Things Public, this book documents and completes what could be called a "thought exhibition:" Reset Modernity! held at ZKM | Center for Art and Media Karlsruhe from April to August 2016. Like the two others, this book, generously illustrated, includes contributions, excerpts, and works from many authors and artists.
