Manual J This one is for determining how much heat the house loses in winter and gains in summer. You do this room-by-room for the whole house, which allows you to determine how much conditioned air each room needs for both heating and cooling. It factors in all the surfaces of the building envelope, with their areas and insulation levels.

HVAC Design Done Right - Manual J, S, T, & D

Heating and cooling loads analysis determines the heating and cooling demands of the building model. After spaces have been placed in all areas of the building model and zones have been created, and you have prepared the project for heating and cooling loads analysis, you can perform heating and cooling loads analysis using the following methods: . Use the integrated tool within Revit to ...
