User Manual, 22 pages. TI-86, TI-85 The TI-86 is a good choice for a graphing calculator to use while learning from Precalculus. The older TI-85 will do most of the activities presented here, but it lacks some editing and statistical features of the newer model. The biggest improvements in the TI-86 are the increased memory and the ability to ...

The TI-84 Plus C shares many features with the TI-84 Plus. However, some features you may be accustomed to using in the classroom may differ. Some of these differences are listed here. † TI-Navigator™ software supports the TI-84, TI-84 Plus, and TI-84 Plus SE. TI-Navigator™ software does not support the TI-84 Plus C.

The TI-85 is the latest and most powerful graphing calculator produced by Texas Instruments. This book describes the use of the TI-85 in courses in precalculus, calculus, linear algebra, differential equations, business mathematics, probability, statistics and advanced engineering mathematics. The book features in-depth coverage of the calculator's use in specific course areas by distinguished experts in each field.

Focusing on how the TI-81 and the TI-85 (two graphing calculators) are designed to aid in the understanding of calculus, this book concentrates on the discovery of relationships and experimenting rather than on computational details. Differences between the two calculators are pointed out where appropriate, as the TI-85 is newer and developed especially for the calculus audience. By not emphasizing button pushing, but concepts and the application of those concepts, a simple programme is built to improve skills. In addition, many programming notes are included throughout.

This book provides a thorough introduction to the Texas Instruments MSP430™ microcontroller. The MSP430 is a 16-bit reduced instruction set (RISC) processor that features ultra-low power consumption and integrated digital and analog hardware. Variants of the MSP430 microcontroller have been in production since 1993. This provides for a host of MSP430 products including evaluation boards, compilers, software examples, and documentation. A thorough introduction to the MSP430 line of microcontrollers, programming techniques, and interface concepts are provided along with considerable tutorial information with many illustrated examples. Each chapter provides laboratory exercises to apply what has been presented in the chapter. The book is intended for an upper level undergraduate course in microcontrollers or mechatronics but may also be used as a reference for capstone design projects. Also, practicing engineers already familiar with another microcontroller, who require a quick tutorial on the microcontroller, will find this book very useful. This second edition introduces the MSP-EXP430FR5994 and the MSP430-EXP430FR2433 LaunchPads. Both LaunchPads are equipped with a variety of peripherals and Ferroelectric Random Access Memory (FRAM). FRAM is a nonvolatile, low-power memory with functionality similar to flash memory.
