as well as opportunity for innovation and improvement. How a pulsejet works is actually very simple. With a valveless design (which this is), fuel and air are directed into a combustion chamber. Once the fuel has

ignited, flame exits the exhaust tube and essentially creates a vacuum in the combustion chamber which draws more fuel and fresh air in.

Maddoxjets - The final word in pulsejets

Kenneth Møller has the plans for a Chinese designed valveless pulse jet engine on his website. There are

Online Library Valveless Pulse Jet Engine

also a number of other designs around, although none have a reputation for ease of construction, power or simplicity of use. And here is a BIG valveless pulsejet used for warming orchards. The developer says

Online Library Valveless Pulse Jet Engine

he'll have the noise problem sorted out within a year and will be manufacturing these pulsejets for about \$500 each.

The key to the operation of a valveless pulse jet is the oscillating shock wave created by repeated explosions in the combustion chamber. In this video they talk about using a spark plug to trigger these

explosions initially, and once the engine is running the process is self sustaining.
